

SCOTTY PUMPKIN (SPUMP) Official White Paper – Version 1.2

Web3 Utility Token for NFT, Digital & Curated Commerce

Blockchain: Solana

Token Standard: SPL

Token Symbol: SPUMP

Official Website: <https://www.scottypumpkin.com>

Publication Date: February 2026

0. Executive Summary

Scotty Pumpkin is a Web3-native ecosystem designed to enable creators, collectors, and curated brands to mint, trade, and purchase NFTs, digital collectibles, and limited-edition physical items using blockchain-based settlement. The ecosystem is powered by SPUMP, a Solana SPL utility token used for payments, marketplace settlement, platform fees, wallet transfers, and optional governance participation.

SPUMP is not a stablecoin, not asset-backed, and does not provide any entitlement to profits, income, dividends, or guaranteed returns. Any market value arises solely from voluntary usage, ecosystem participation, and open-market demand.

1. Legal & Risk Disclaimers

1.1 General Disclaimer

This White Paper is provided for informational purposes only and does not constitute a prospectus, offering document, solicitation for investment, or offer of securities in any jurisdiction.

1.2 No Financial, Legal, or Tax Advice

Nothing in this document constitutes financial, legal, or tax advice. Participants are solely responsible for assessing risks and seeking independent professional advice.

1.3 Utility Token Status

SPUMP is a utility token intended for use within the Scotty Pumpkin ecosystem and selected partner platforms. It does not represent equity, ownership, or shareholder rights and does not confer rights to profits, income, dividends, or revenue sharing.

1.4 No Refund Policy

Acquisition of SPUMP tokens is non-refundable and cannot be cancelled.

1.5 Forward-Looking Statements

Certain statements in this document may be forward-looking and subject to risks and uncertainties. Actual outcomes may differ materially.

1.6 Jurisdictional Restrictions

Users are responsible for compliance with all applicable local laws in their jurisdiction.

2. Introduction

Despite the rapid growth of NFTs and decentralized commerce, creators and buyers still face fragmented platforms, inconsistent payment systems, and high transaction friction. Scotty Pumpkin addresses these challenges by introducing a unified Web3 ecosystem where SPUMP serves as the native settlement and utility token.

3. Vision & Scope

3.1 What Scotty Pumpkin Is

A Web3 creator and commerce ecosystem, a payment and settlement layer for NFTs and curated marketplaces, and a utility-driven token economy based on real usage.

3.2 What Scotty Pumpkin Is Not

Scotty Pumpkin is not a stablecoin, not an asset-backed token, not a yield or investment product, and not a profit-sharing mechanism.

4. Ecosystem Overview

Official Platform: <https://www.scottypumpkin.com>

SPUMP is designed for use across the Scotty Pumpkin NFT art marketplace, digital and physical luxury and fashion marketplaces, and curated partner platforms.

5. Web3 Utility & Payments

5.1 NFT Minting & Conversion

SPUMP may be used to pay for NFT minting, artwork-to-NFT conversion, metadata updates, and creator tools.

5.2 NFT Marketplace Transactions

SPUMP functions as a native payment currency for primary and secondary NFT sales, with on-chain settlement.

5.3 Partner Marketplace Commerce

SPUMP may be accepted for digital collectibles and NFT-linked physical items on selected partner platforms.

6. Fees, Payments, Transfers & Staking Policy

Buyer Fee: 1%

Seller Fee: 1%

Wallet-to-Wallet Transfer Fee: 1%

Fees are applied automatically via smart contracts and are used exclusively for platform operation, security, development, and ecosystem sustainability.

7. Web3 Payment & NFT Flow Diagram

Figure 1 – Scotty Pumpkin Web3 Payment & NFT Flow Diagram
Diagram insertion point. This diagram illustrates minting, marketplace transactions, buyer/seller settlement, fee deduction, and ecosystem circulation.

8. Staking Policy

Staking is optional, not permanently active, and does not guarantee yield or returns. Holders must monitor of[?]icial communications.

9. Token Speci[?]ications

Blockchain: Solana

Token Standard: SPL

Decimals: 6

Total Supply: 10,000,000,000 SPUMP

Section 10A — Token Allocation and Liquidity Framework

10A.1 Total Token Supply

The Scotty Pumpkin ecosystem operates with a fixed maximum supply of 10,000,000,000 SPUMP tokens.

No additional tokens may be minted beyond this limit.

SPUMP functions as the primary utility and activity token within the Scotty Pumpkin Web3 ecosystem.

The token supports marketplace participation, creator engagement, digital asset transactions, and interaction across the ecosystem platforms including Scotty Pumpkin, Sosay, and Bfinit.

The fixed supply model ensures long-term transparency and predictable token economics.

10A.2 Token Allocation Structure

The total SPUMP supply is distributed across key ecosystem functions to support liquidity, platform development, and long-term sustainability.

Allocation overview:

DEX Liquidity Reserve — 100,000,000 SPUMP
Employee Participation (Paid) — 1,000,000,000 SPUMP
Ecosystem Development Treasury — 3,000,000,000 SPUMP
CEX Distribution Pool — 5,900,000,000 SPUMP

These allocations ensure a balanced distribution between liquidity provisioning, ecosystem growth, and long-term treasury stability.

10A.3 DEX Liquidity Reserve

Up to 100,000,000 SPUMP may be allocated to decentralized exchange liquidity pools.

DEX liquidity enables early market access and price discovery through automated market maker (AMM) mechanisms. Liquidity may be expanded progressively based on trading demand.

Liquidity tranches may range between 1,000,000 and 20,000,000 SPUMP paired with proportional stable asset liquidity such as USDC or SOL.

This structure helps maintain balanced liquidity conditions while preventing excessive supply shocks.

10A.4 Employee Participation Allocation

1,000,000,000 SPUMP are allocated for employee participation and ecosystem contributors.

These tokens are fully paid allocations and are not granted free of charge. This structure ensures that contributors participate in the ecosystem under the same economic conditions as other participants.

Employee participation aligns contributors with the long-term development of the ecosystem.

10A.5 Ecosystem Development Treasury

3,000,000,000 SPUMP are held within treasury custody wallets to support ecosystem expansion and strategic development.

Treasury reserves may be used for:

- ecosystem development
- strategic partnerships
- liquidity reinforcement
 - platform expansion
- community programs

Treasury tokens are not automatically introduced into market circulation and are managed under ecosystem governance policies.

10A.6 Centralized Exchange Distribution Pool

5,900,000,000 SPUMP are reserved for long-term distribution through centralized exchange markets and ecosystem growth programs.

These tokens may be introduced progressively based on market demand, exchange liquidity requirements, and ecosystem expansion.

Controlled release ensures that market supply grows in alignment with platform adoption

10A.7 Initial Circulating Supply

At launch, the initial circulating supply of SPUMP is expected to be approximately 50,000,000 tokens.

This represents approximately 0.5% of the total token supply.

A limited initial circulation supports orderly market development and price discovery while allowing the ecosystem to grow gradually.

10A.8 Initial Liquidity Model

Initial decentralized exchange liquidity will consist of:

1,000,000 SPUMP paired with approximately 1,000 USDC (or equivalent).

This pool establishes the initial market trading ratio for the token.

DEX liquidity may expand progressively based on trading demand up to the maximum DEX reserve allocation of 100,000,000 SPUMP.

10A.9 SPUMP-USFRANC Ecosystem Bridge

The Scotty Pumpkin ecosystem operates alongside the USFRANC (USFF) settlement currency.

Within the ecosystem:

SPUMP functions as the activity and participation token.
USFF functions as the settlement and cross-chain liquidity asset.

Through the USFRANC Wallet (www.usfrancwallet.com), users may swap assets
across multiple blockchain
networks including Solana, Ethereum, and Polkadot.

Users may convert external assets into USFF, then swap into SPUMP to participate in
the Scotty
Pumpkin marketplace ecosystem.

Likewise, users may convert SPUMP earnings into USFF for settlement or exchange
liquidity access.

This bridge mechanism connects the ecosystem with broader digital asset markets
and enables
efficient entry and exit between ecosystem platforms and global liquidity networks.

Section 10B — Liquidity Framework and Architecture

10B.1 Liquidity Strategy

The Scotty Pumpkin ecosystem uses a hybrid liquidity model combining decentralized exchange (DEX) liquidity pools and centralized exchange (CEX) trading infrastructure.

This model is designed to support transparent price discovery, gradual market development, and global liquidity access. Liquidity is introduced progressively to prevent sudden market dilution and to maintain healthy trading conditions.

The liquidity framework integrates multiple ecosystem layers including decentralized trading pools, centralized exchange markets, treasury reinforcement mechanisms, and cross-ecosystem settlement through the USFRANC (USFF) wallet infrastructure.

10B.2 Initial Decentralized Exchange Liquidity

SPUMP will initially launch on decentralized exchanges using an automated market maker (AMM) liquidity pool.

Initial liquidity configuration:

1,000,000 SPUMP paired with approximately 1,000 USDC (or equivalent).

This initial pool establishes the first trading ratio for SPUMP within decentralized markets

10B.3 Progressive Liquidity Expansion

DEX liquidity may expand progressively based on trading demand.

Liquidity may be introduced in structured tranches ranging between:

1,000,000 SPUMP and 20,000,000 SPUMP

Each tranche is paired with proportional stable-asset liquidity such as USDC or SOL.

Up to 100,000,000 SPUMP may be allocated to decentralized liquidity pools from the DEX liquidity reserve.

Additional tranches may only be introduced after existing liquidity has been substantially absorbed by market activity.

10B.4 Centralized Exchange Liquidity

Centralized exchanges provide broader market access and deeper trading liquidity.

At launch approximately 50,000,000 SPUMP may enter circulation across centralized exchange markets and market-making infrastructure.

These tokens may support:

- order-book liquidity
- exchange trading availability
- market-making operations

Centralized exchanges enable global accessibility and support wider ecosystem participation.

10B.5 Liquidity Reinforcement

The ecosystem treasury may reinforce liquidity pools by adding additional stable assets to existing trading pools.

Increasing the paired asset side of the pool strengthens market depth and trading stability without increasing SPUMP token supply.

This mechanism helps support long-term market resilience and sustainable trading conditions.

10B.6 Liquidity Governance

Liquidity allocations and adjustments are managed through ecosystem treasury policies and governance oversight.

Liquidity decisions may consider:

- market conditions
- ecosystem adoption
 - trading demand
 - platform growth

The objective is to maintain balanced liquidity conditions while supporting long-term ecosystem expansion.

10B.7 Liquidity Architecture

The Scotty Pumpkin liquidity system operates through a layered architecture connecting decentralized trading, ecosystem activity, and centralized exchange markets.

Liquidity flow architecture:

10B.8 Ecosystem Liquidity Sources

Liquidity circulation within the ecosystem is supported by activity across multiple platforms.

Scotty Pumpkin Platform:

Users utilize SPUMP for NFTs, digital goods, and marketplace transactions.

Sosay Creator Platform:

Creators may receive income in SPUMP or USFF and convert earnings through the ecosystem wallet.

Bfinit Infrastructure Platform:

Businesses may use SPUMP or USFF within hosting, digital services, and e-commerce systems.

These platforms generate continuous transactional activity which supports sustainable liquidity circulation.

10B.9 Cross-Chain Liquidity Bridge

The ecosystem integrates with USFRANC (USFF), which functions as the settlement and cross-chain liquidity currency.

Through the USFRANC Wallet (www.usfrancwallet.com), users may swap assets across multiple blockchain networks including Solana, Ethereum, and Polkadot.

Users may convert external digital assets into USFF and subsequently swap into SPUMP to participate in the Scotty Pumpkin ecosystem.

Likewise, SPUMP earnings may be converted into USFF for settlement or withdrawal through external exchanges.

This bridge architecture enables efficient entry and exit between the ecosystem and global digital asset markets.

Section 10C — Ecosystem Architecture and Economic Integration

10C.1 Ecosystem Overview

The Scotty Pumpkin ecosystem operates as an interconnected Web3 digital economy built around the SPUMP token and supported by the USFRANC (USFF) settlement layer.

The objective of the ecosystem is to connect creators, businesses, digital commerce platforms, and decentralized financial infrastructure within a unified economic environment.

The ecosystem integrates multiple platforms including Scotty Pumpkin Web3 services, the Sosay creator network, Bfinit digital commerce infrastructure, and the USFRANC wallet settlement system.

10C.2 Core Ecosystem Components

The ecosystem is composed of several interconnected platforms that generate economic activity within the SPUMP token economy.

Scotty Pumpkin Platform

Provides NFT minting, digital goods trading, and Web3 marketplace services.

Sosay Creator Platform

Allows creators to publish content, sell digital assets, and receive payments in SPUMP or USFF.

Bfinit Digital Commerce Platform

Provides e-commerce infrastructure, hosting services, and digital marketplace capabilities for businesses.

USFRANC Wallet Infrastructure

Provides secure wallet services, asset storage, and cross-chain swapping between supported blockchain networks.

10C.3 Economic Activity Layer

The SPUMP token functions as the activity token within the ecosystem.

Users may use SPUMP to:

- purchase digital goods and NFTs
 - support creators
- access Web3 marketplace services
- participate in digital commerce activities

Economic activity across ecosystem platforms contributes to liquidity circulation and market participation.

10C.4 Settlement and Liquidity Layer

USFRANC (USFF) operates as the settlement and liquidity layer within the ecosystem.

USFF enables users to:

- convert assets between blockchain networks
 - settle marketplace transactions
- convert earnings from ecosystem platforms
 - access centralized exchange liquidity

This settlement layer connects ecosystem activity with global digital asset markets.

10C.5 Cross-Chain Integration

Through the USFRANC Wallet infrastructure, users may swap assets across multiple blockchain networks including Solana, Ethereum, and Polkadot.

Cross-chain functionality allows users to move value between external digital asset markets and the Scotty Pumpkin ecosystem.

This architecture enables efficient onboarding of users from multiple blockchain ecosystems.

10C.6 Ecosystem Economic Flow

The economic flow within the ecosystem follows a structured model:

This model connects decentralized platform activity with global liquidity networks.

10C.7 Ecosystem Expansion

The ecosystem architecture is designed to support future expansion including additional Web3 services, digital marketplaces, creator economies, and financial infrastructure.

Future integrations may include additional blockchain networks, payment systems, and digital commerce platforms.

This modular architecture allows the ecosystem to grow while maintaining compatibility with evolving blockchain technologies.

11. Technology & Smart Contracts

Solana smart contracts handle settlement, fees, minting services, and transfers with a focus on security, transparency, and auditability.

12. Governance

Governance may be introduced progressively for non-financial ecosystem decisions.

13. Roadmap

Foundation → Launch → Marketplace Expansion → Ecosystem Maturity.

14. Conclusion

Scotty Pumpkin is a utility-first Web3 ecosystem built around real usage, NFT commerce, and creator participation. SPUMP exists to be used, not promised.

Appendix A – Scotty Pumpkin Ecosystem Overview (Visual)

SCOTTY PUMPKIN

WWW.SCOTTYPUMPKIN.COM

Scotty Pumpkin (SPUMP) end-to-end Web3 ecosystem diagram showing NFT minting and conversion, marketplace settlement, buyer and seller payments, SPUMP circulation, and usage across Scotty Pumpkin and partner marketplaces.

Appendix B – Scotty Pumpkin Ecosystem Architecture(Visual)

1.1 Scotty Pumpkin Creator Economy Model

The Scotty Pumpkin ecosystem supports a creator-first digital economy allowing creators to publish, mint NFTs, and monetize content.

Creators operate through verified profiles linked to blockchain wallets.

Sosay powers the content publishing layer where creators publish articles, videos, artwork, music, and premium content.

Revenue channels include NFT sales, subscriptions, digital content sales, tips, and merchandise through e-Bfinit.

A core principle of the platform is creator ownership of digital assets and audience relationships.

1.2 Marketplace Fee and Revenue Distribution Model

The Scotty Pumpkin marketplace supports NFTs, digital assets, physical goods, services, and creator merchandise.

Transactions occur between buyer wallet, marketplace processing layer, and seller wallet.

Platform infrastructure fees support development and ecosystem sustainability.

Typical distribution example: Creator 85–90%, Platform Infrastructure 5–10%, Royalty Pool 2–5%.

The platform supports NFT royalties so creators receive revenue on secondary sales.

1.3 Governance and Decentralization Model

The Scotty Pumpkin ecosystem incorporates a governance framework combining platform oversight and community participation.

A governance council may oversee major upgrades, partnerships, and treasury allocation.

Community members may submit ecosystem proposals including feature improvements or creator initiatives.

SPUMP token holders may participate in governance voting mechanisms.

As the ecosystem evolves, governance may progressively decentralize allowing token holders and creators greater influence.

Appendix C - Web3 Creator Economy, Marketplace & Token Infrastructure

1. Executive Summary

Scotty Pumpkin is a Web3 digital ecosystem designed to connect creators, collectors, merchants, and users through a unified digital marketplace infrastructure.

The platform integrates NFT creation, creator content publishing, and digital commerce within a single ecosystem supported by blockchain technology.

The ecosystem combines three core platforms:

- Scotty Pumpkin Marketplace – a Web3 marketplace for NFTs, goods, services, and digital assets
- Sosay Creator Platform – a publishing system for creator content and monetization
- e-Bfinit Commerce Infrastructure – an e-commerce engine supporting global digital commerce

The ecosystem is powered by two digital tokens:

- USFF – the ecosystem payment currency
- SPUMP – the Scotty Pumpkin utility token

2. Vision and Mission

The long-term vision of Scotty Pumpkin is to establish a decentralized digital economy where creators retain ownership of their work while participating in global digital commerce.

3. The Problem

Modern digital platforms often centralize control over content distribution and revenue streams.

Creators frequently lose ownership of their work while receiving only a small portion of the revenue .

4. The Scotty Pumpkin Solution

Scotty Pumpkin provides a unified ecosystem that combines creator publishing, NFT minting, and marketplace commerce.

5. Ecosystem Architecture

The ecosystem includes the Scotty Pumpkin marketplace, Sosay creator platform, e-Bfinit commerce infrastructure, NFT studio, wallet vault, and distributed storage nodes.

6. Platform Components

NFT Studio – mint NFTs

Marketplace – trade digital assets

Sosay – creator publishing

e-Bfinit – commerce infrastructure

Wallet Vault – asset storage

7. Token Economy

The ecosystem operates using a dual-token model.

USFF functions as the payment currency.

SPUMP functions as the utility token.

SPUMP supply: 10 Billion tokens.

8. Economic Flow

Users may purchase NFTs, products, services, or digital content using USFF, SPUMP, or other supported payment systems.

9. Creator Economy Model

Creators may generate income through NFT sales, subscriptions, digital content sales, tips, and merchandise.

10. Marketplace Fee Model

The Scotty Pumpkin marketplace applies an approximate 3% platform transaction fee.

Creators retain the majority of revenue from sales.

11. Technical Architecture

Frontend: React

Backend: Node.js

API transaction layer

Blockchain smart contract integration

Distributed NFT storage nodes

12. NFT Infrastructure

NFT mint workflow:

upload asset → metadata generation → storage → blockchain mint → wallet transfer → marketplace listing.

13. Security Model

Security includes smart contract verification, wallet ownership control, transaction validation, and secure API infrastructure.

14. Governance

SPUMP token holders may participate in governance decisions relating to platform development and ecosystem proposals.

15. Development Roadmap

Phase 1 – NFT studio launch

Phase 2 – creator platform expansion

Phase 3 – marketplace growth

Phase 4 – token ecosystem integration

Phase 5 – global ecosystem scaling

16. Legal and Compliance

The ecosystem aims to operate within evolving global regulatory frameworks.

17. Risk Factors

Participation in blockchain ecosystems involves technological, market, and regulatory risks.

18. Long-Term Vision

The ecosystem seeks to establish a decentralized creator economy combining digital ownership, content publishing, and Web3 commerce.

Appendix D - Payment with SPUMP

1. Executive Summary

The Scotty Pumpkin ecosystem is designed to provide an alternative digital environment where users may create, distribute, and monetize digital assets through decentralized infrastructure.

Within the ecosystem, participants may buy, hold, swap, and use SPUMP tokens for activities including marketplace purchases, creator support, digital goods, and platform services.

2. No Third Party Access

Modern digital platforms often centralize control over content distribution and revenue streams, leaving creators with limited ownership and long-term participation in the value generated by their work.

3. transaction contribution mechanism

A transaction contribution mechanism applies to certain ecosystem activities. Any such contribution collected by the platform treasury may be allocated to support the development and sustainability of the ecosystem, including areas such as:

- 60% – Ecosystem growth and investment initiatives
 - 10% – Treasury reserves and platform stability
 - 10% – Operational development and infrastructure
 - 10% – Community programs and social initiatives
- 10% – Contributor and employee incentive programs

4. Conclusion

These allocations represent the intended operational framework of the ecosystem and may evolve over time as the platform develops. Participation in the ecosystem does not represent ownership in any company, investment contract, or guarantee of financial return. SPUMP functions solely as a digital utility token within the Scotty Pumpkin ecosystem.

Section — Legal Status, Ownership & Risk Disclosure

Legal Nature of SPUMP

Scotty Pumpkin (SPUMP) is a cryptographic digital asset issued on the Solana blockchain using the SPL token standard. SPUMP is designed and operated as a utility token, intended for use within the Scotty Pumpkin ecosystem, including payments, access to services, and participation in digital platforms.

SPUMP is not a regulated financial instrument at the time of issuance. However, users acknowledge that regulatory frameworks may evolve, and the classification of digital assets may change in the future depending on jurisdiction.

Ownership of Tokens

Users who acquire SPUMP tokens:

- Obtain full control of their tokens through:
 - A non-custodial wallet (private key ownership), or
 - A custodial account via a centralized exchange (CEX)
 - Retain full responsibility for:
 - Storage
 - Security
 - Management of their assets

Ownership is determined solely by control of the wallet or account in which the tokens are held.

□

Acquisition of SPUMP

SPUMP tokens can be acquired via:

- Decentralized exchanges (DEX)
- Centralized exchanges (CEX)
- Peer-to-peer transactions

Upon

purchase, tokens are transferred to the user's wallet or exchange account.

Utility Only – No Financial Rights

SPUMP:

- Does not represent equity, shares, or ownership in any entity
 - Does not grant rights to profits, dividends, interest, or revenue
 - Does not provide guaranteed returns or financial performance
- The token is strictly intended for utility within the ecosystem.

Risk Disclosure

Participation in SPUMP involves inherent risks associated with digital assets.

Users must understand that:

- Cryptocurrency markets are highly volatile
 - Prices may fluctuate significantly
- There is a risk of partial or total loss of value
- Smart contracts, exchanges, and wallets carry technical risks
 - Regulatory changes may impact usage or availability

Users are solely responsible for evaluating the risks before acquiring, holding, swapping, or using SPUMP.

No Guarantee or Investment Promise

Scotty Pumpkin (SPUMP):

- Offers no guarantees of value, return, or liquidity
 - Does not constitute an investment product
 - Is not marketed as a financial opportunity

All purchases are made at the user's own discretion and risk.

Exchange Disclaimer Alignment

Users acknowledge that the risks associated with SPUMP are consistent with the standard disclaimers provided by cryptocurrency exchanges when purchasing digital assets.

Asset Disclosure, Capital Structure & Tokenomics

1. First Sale Capital Allocation

From the initial sale of SPUMP tokens:

- 60% of all primary sale proceeds are retained by SAS Association
Familiare Fin (Affin)
 - This capital remains the exclusive property of Affin
 - Is not owned by token holders
- Does not represent any financial claim or entitlement

2. Capital Ownership Clarification

SPUMP holders:

- Do not own or control retained capital
- Do not receive interest, dividends, or returns
- Participate solely through ecosystem utility

Affin:

- Retains full ownership and control of all retained capital
 - Allocates and manages funds independently
- Uses capital strictly for ecosystem development and support

3. Capital Deployment Strategy

The retained 60% capital is allocated by Affin into:

- Government-backed investment instruments
- Sovereign or institutional-grade financial products
 - Low-risk capital preservation strategies

4. Ecosystem Allocation Model (60/10/10/10/10)

1. Affin Capital Reserve – 60%
2. Development & Technology – 10%
3. Operations & Infrastructure – 10%
4. Marketing & Growth – 10%
5. Community & Expansion – 10%

5. Token Mint & Supply Policy

- Total Supply: 10,000,000,000 SPUMP
 - Fully minted at launch
- Fixed supply with no additional issuance
 - No inflation mechanism
- Supply is permanently locked and verifiable on-chain

6. Liquidity Strategy (DEX & CEX)

SPUMP follows a dual liquidity model:

DEX Phase:

- Initial liquidity on Solana DEX (Raydium / Orca)
 - Controlled low-float liquidity

CEX Phase:

- Progressive release in tranches (e.g. 5M to 50M to 100M)
- Primary trading and price discovery occurs on centralized exchanges

Objective:

- Reduce volatility
- Ensure controlled market growth
- Support long-term ecosystem stability

7. Capital & Ecosystem Flow Diagram

8. Legal Status & Risk Disclosure

SPUMP is a utility token on the Solana blockchain.
It is not a regulated financial instrument and does not grant
ownership, equity, or financial rights.

No returns or guarantees are provided.

All participation carries risk, including potential loss of value.

Appendix E- Token Supply & Minting Policy

1. Total Supply

- Total Supply: 10,000,000,000 SPUMP
- All tokens have been minted at creation

2. Supply Lock Statement

- The full supply of 10 billion SPUMP is fixed and locked at mint
 - No additional tokens can be created beyond this amount
 - No inflation mechanism exists

3. Distribution Mechanism

- Tokens are released progressively through:
 - DEX liquidity
 - CEX listings
 - Ecosystem allocation
- The release strategy is controlled to:
 - Avoid excessive market dilution
- Support stable market development
 - Align with ecosystem growth

4 Transparency

- Supply is verifiable on-chain (Solana)
- No hidden minting or future issuance
- All allocations follow disclosed structure

Appendix F-Entity Ownership & Project Control Statement

1. Scotty Pumpkin (SPUMP) is owned, developed, and operated by:

SAS Association Familiale Fin (Affin)

Affin is a legally registered French entity with the following details:

- Legal Name: ASSOCIATION FAMILIALE FIN (AFFIN) SAS
- Registration Number (RCS): 803 965 227 R.C.S. Montpellier
 - Date of Incorporation: 03 September 2014
- Registered Address: 8 Rue de Dublin, 34200 Sète, France
 - Legal Form: Société par Actions Simplifiée (SAS)
 - Share Capital: €53,000

2. Business Activity

Affin operates as a family holding company engaged in:

- Capital investments
- Financial asset management
- Cryptocurrency and digital asset activities
- Real estate investment and development
- Technology and cybersecurity product development

3. Parent Entity

Scotty Pumpkin (SPUMP) is owned and operated by SAS Association Familiale Fin (Affin), a French registered holding company under RCS Montpellier (803 965 227), président /ceo Brian Fin. with its registered office at 8 Rue de Dublin, 34200 Sète, France.

4 Associated Entities

The ecosystem operates through affiliated entities, including USFRANC LTD, responsible for Spump in the UK blockchain and cryptocurrency infrastructure, alongside supporting entities providing hosting, cybersecurity, and digital commerce services.

5. Roles & Responsibilities

Affin: Ownership, capital structure, and governance

USFRANC LTD: (Affin owned company 100% company Blockchain infrastructure and digital asset management in the UK
Bfin SASU France (100% affin subsidiary company) Hosting and technical infrastructure, blockchain management / technical teams, research and développement in crypto and
Bitss: Cybersecurity layer
Sosay / Scotty Pumpkin: Marketplace and user ecosystem

6. Legal Position

SPUMP is a utility token and does not grant ownership, equity, or financial rights in any entity. Holders of SPUMP do not have rights to profits, dividends, or assets of Affin or associated entities.
