This white paper has been prepared in compliance with the requirements of the Commission Implementing Regulation 2024/2984 of 29 November 2024 implementing technical standards for the application of Regulation (EU) 2023/1114 of the European Parliament and of the Council with regard to forms, formats and templates for the crypto-asset white papers

Scotty pumpkin (Spump) token white paper

No	FIELD	CONTENT
00	Table of Content	**SUMMARY** **Part A - Information about the offeror or the person seeking admission to trading** 1. Name 2. Legal Form 3. Registered address 4. Head office 5. Registration date 6. Legal entity identifier 7. Another identifier required pursuant to applicable national law 8. Contact telephone number 9. E-mail address 10. Response time (Days) 11. Parent company 12. Members of the management body 13. Business Activity 14. Parent company business activity 15. Newly established 16. Financial condition for the past three years 17. Financial condition since registration **Part B - Information about the issuer, if different from the offeror or person seeking admission to trading** **Part C - Information about the operator of the trading platform in cases where it draws up the crypto-asset white paper and information about other persons** **Part D - Information about the crypto-asset project** 1. Crypto-asset project name 2. Crypto-assets name 3. Abbreviation 4. Crypto-asset project description 5. Details of all natural or legal persons involved in the implementation of the crypto-asset project 6. Utility Token Classification 7. Key Features of Goods/Services for Utility Token Projects 8. Plans for the token 9. Resource Allocation 10. Planned use of Collected funds or crypto-Assets **Part E - Information about the offer to the public of crypto-assets or their admission to trading**

1. Public offering or admission to trading
2. Reasons for public offer or admission to trading
3. Fundraising target
4. Minimum subscription goals
5. Maximum subscription goals

1. Oversubscription acceptance
2. Oversubscription allocation
3. Issue price
4. Official currency or any other crypto-assets determining the issue price 5. Subscription fee 6. Offer price determination method 7. Total number of offered/traded crypto-assets

8. Targeted holders 9. Holder restrictions
10. Reimbursement notice
11. Refund mechanism 12. Refund timeline 13. Offer phases
14. Early purchase discount
15. Time-limited offer
16. Subscription period beginning
17. Subscription period end
18. Safeguarding arrangements for offered funds/crypto-Assets
19. Payment methods for crypto-asset purchase
20. Value transfer methods for reimbursement
21. Right of withdrawal
22. Transfer of purchased crypto-assets
23. Transfer time schedule
24. Purchaser's technical requirements
25. Crypto-asset service provider (CASP) name
26. CASP identifier 27. Placement form 28. Trading platforms name 29. Trading platforms Market identifier code (MIC) 30. Trading platforms access
31. Involved costs 32. Offer expenses 33. Conflicts of interest 34. Applicable law 35. Competent court

Part F - Information about the crypto-assets

1. Crypto-asset type
2. Crypto-asset functionality
3. Planned application of functionalities
4. Type of crypto-asset white paper
5. The type of submission
6. Crypto-asset characteristics
7. Commercial name or trading name
8. Website of the issuer
9. Starting date of offer to the public or admission to trading
10. Publication date

11. Any other services provided by the issuer 12. Language or languages of the crypto-asset white paper
13. Digital token identifier code used to uniquely identify the

crypto-asset or each of the several crypto assets to which the white paper relates, where available

1. Functionally fungible group digital token identifier, where available
2. Voluntary data flag
3. Personal data flag
4. LEI eligibility
5. Home Member State
6. Host Member State

Part G - Information on the rights and obligations attached to the crypto-assets

1. Purchaser rights and obligations 2. Exercise of rights and obligations 3. Conditions for modifications of rights and obligations 4. Future public offers 5. Issuer retained crypto-assets 6. Utility token classification 7. Key features of goods/services of utility tokens 8. Utility tokens redemption 9. Non-trading request

10. Crypto-assets purchase or sale modalities
11. Crypto-assets transfer restrictions
12. Supply adjustment protocols
13. Supply adjustment mechanisms
14. Token value protection schemes
15. Token value protection schemes description
16. Compensation schemes
17. Compensation schemes description
18. Applicable law
19. Competent court

Part H – Information on the underlying technology

1. Distributed ledger technology (DLT)
2. Protocols and technical standards
3. Technology used
4. Consensus mechanism
5. Incentive mechanisms and applicable fees
6. Use of distributed ledger technology
7. DLT functionality description
8. Audit
9. Audit outcome

Part I – Information on risks

1. Offer-related risks
2. Issuer-related risks
3. Crypto-assets-related risks
4. Project implementation-related risks
5. Technology-related risks
6. Mitigation measures

Part J – Information on the sustainability indicators in relation to adverse impact on the climate and other environment-related adverse impacts

1. Adverse impacts on climate and other environment-related adverse impacts

01	Date of Notification	2026-04-13
02	Statement in accordance with Article 6(3) of Regulation (EU) 2023/1114	This crypto-asset white paper has not been approved by any competent authority in any Member State of the European Union.In accordance with Regulation (EU) 2023/1114, no prior authorization or approval is required for the publication of this crypto-asset white paper. The issuer of the crypto-asset is solely responsible for the content of this white paper. The information contained herein has been prepared in good faith and is intended to be fair, clear and not misleading.
03	Compliance statement in accordance with Article 6(6) of Regulation (EU) 2023/1114	This crypto-asset white paper has been prepared in accordance with Title II of Regulation (EU) 2023/1114 of the European Parliament and of the Council. To the best of the knowledge of the issuer and its management body, the information contained in this crypto-asset white paper is fair, clear and not misleading and does not omit anything likely to affect its import. The issuer confirms that this crypto-asset white paper complies with the applicable requirements set out in Regulation (EU) 2023/1114 in relation to the offering of crypto-assets to the public and/or their admission to trading on a trading platform.

04	Statement in accordance with Article 6(5), points (a), (b), (c), of Regulation (EU) 2023/1114	The crypto-asset described in this crypto-asset white paper may lose its value in part or in full and may be subject to significant price volatility. The crypto-asset may not always be transferable and may not be liquid. There is no guarantee that a market will develop or be maintained, and holders may not be able to sell or exchange the crypto-asset at their desired time or price.
05	Statement in accordance with Article 6(5), point (d), of Regulation (EU) 2023/1114	The utility token described in this crypto-asset white paper may not be exchangeable for the goods or services referred to in this white paper. The ability to use the utility token depends on the development, availability and continued operation of the crypto-asset project and its associated ecosystem. There is no guarantee that the crypto-asset project will be successfully developed, maintained or continued. In the event of a failure, suspension or discontinuation of the project, the utility token may lose its utility, in whole or in part.
06	Statement in accordance with Article 6(5), points (e) and (f), of Regulation (EU) 2023/1114	The crypto-asset described in this crypto-asset white paper is not covered by any investor compensation scheme established under Directive 97/9/EC of the European Parliament and of the Council. The crypto-asset is also not covered by any deposit guarantee scheme established under Directive 2014/49/EU of the European Parliament and of the Council.

		Accordingly, holders of the crypto-asset will not benefit from any statutory compensation or protection scheme in the event of losses.

07	Warning in accordance with Article 6(7), second subparagraph, of Regulation (EU) 2023/1114	Warning This summary should be read as an introduction to the crypto-asset white paper. Any decision to purchase the crypto-asset should be based on a consideration of the crypto-asset white paper as a whole and not on the summary alone. The offer to the public of this crypto-asset does not constitute an offer or solicitation to purchase financial instruments. Any such offer or solicitation may be made only by means of a prospectus or other offering documents in accordance with applicable law. This crypto-asset white paper does not constitute a prospectus within the meaning of Regulation (EU) 2017/1129 of the European Parliament and of the Council, nor any other offering document pursuant to Union or national law.
08	Characteristics of the crypto-asset	The crypto-asset “SPUMP” (Scotty Pumpkin Token) is a utility token designed to operate within the Scotty Pumpkin ecosystem, including its marketplace, digital commerce infrastructure, and associated Web3 applications. SPUMP is intended to be used as a means of exchange within the ecosystem for the purchase of goods, services, digital assets, and platform-related functionalities. It may also be used to access features, benefits, or incentives offered within the Scotty Pumpkin platform and its integrated services. SPUMP does not represent any ownership right, shareholding, or equity interest in the issuer or in any affiliated entity. It does not grant governance rights, voting rights, or entitlement to dividends, profits, or revenue. The token is designed as a utility instrument only and should not be considered a financial instrument, security, or investment product.
09		Holders of SPUMP do not acquire any rights or obligations vis-à-vis the issuer or any related entity, except for the ability to use the token within the Scotty Pumpkin ecosystem, subject to availability and functionality. SPUMP does not grant: - governance or voting rights, - enforceable claims against the issuer, - rights to profits, revenues, or distributions, - ownership or equity rights. The utility of SPUMP is limited to its intended use within the ecosystem and depends on the continued development and operation of the platform.

10	Key information about the offer to the public or admission to trading	The SPUMP token is issued as a Solana-based SPL token and is designed to operate within the Solana ecosystem. As of 17 March 2026, the SPUMP token is available for trading on decentralized exchanges (DEX) on the Solana network, including Raydium, with routing and liquidity aggregation supported via Jupiter. Trading pairs such as SPUMP/USDC may be used to facilitate market access and price discovery. These decentralized trading venues enable users to access liquidity directly through on-chain protocols. However, trading conditions, including price, liquidity, and execution, are subject to market dynamics and third-party platform functionality. The issuer may, at a later stage, seek admission of the SPUMP token to centralized cryptocurrency exchanges (CEX). Any such listings remain subject to the approval, requirements, and discretion of the respective platforms. There is no guarantee that SPUMP will be listed on additional trading platforms, nor that any specific level of liquidity, trading volume, or market price will be achieved or maintained. The total supply, allocation structure, and distribution strategy of SPUMP are defined within this white paper and may be implemented progressively in line with ecosystem development and market demand.
		The SPUMP token is issued as a Solana-based SPL token and is designed to operate within the Solana ecosystem. As of 17 March 2026, the SPUMP token is available for trading on decentralized exchanges (DEX) on the Solana network, including Raydium, with routing and liquidity aggregation supported via Jupiter. Trading pairs such as SPUMP/USDC facilitate market access and price discovery. Access to SPUMP and participation in trading activities may be conducted through compatible non-custodial wallets within the Solana ecosystem, including, but not limited to, Phantom. These decentralized trading venues enable users to access liquidity directly through on-chain protocols. However, trading conditions, including price, liquidity, and execution, are subject to market dynamics and the functionality of third-party platforms and wallet providers. The issuer may, at a later stage, seek admission of the SPUMP token to centralized cryptocurrency exchanges (CEX). Any such listings remain subject to the approval, requirements, and discretion of the relevant platforms. There is no guarantee that SPUMP will be listed on additional trading platforms, nor that any specific level of liquidity, trading volume, or market price will be achieved or maintained.
		The total supply, allocation structure, and distribution strategy of SPUMP are defined within this white paper and may be implemented progressively in line with ecosystem development and market demand.

Issuer: SPUMP Project (Scotty Pumpkin Ecosystem)

The SPUMP crypto-asset is issued and administered within Europe by:

SAS Association Familiale Fin (AFFIN)
Registration No: 80396522700017 (RCS Montpellier)
Registered Office: 8 Rue Dublin, 34200 Sète, France

President:
Brian Edmond Patrick Fin

Administrator:
Brian Edmond Patrick Fin
Qualifications: MScFSM / Dip GRC / Dip. Marketing Management (IMM)

The project is supported by:

USFRANC LTD
Registered Office: 4th Floor, Silverstream House,
45 Fitzroy Street, London, W1T 6EB, United Kingdom

Chief Executive Officer (CEO):
Brian Edmond Patrick Fin

Brian Edmond Patrick Fin also acts as Director of SAS Association Familiale Fin (AFFIN) and Administrator of the SPUMP project.

The issuer is solely responsible for the content of this crypto-asset white paper in accordance with Regulation (EU) 2023/1114.

Part A - Information about the offer or or the person seeking admission to trading

A.1	Name	SAS Association Familiale fin (Affin)
A.2	Legal Form	Societé par actions Simplifiée (SAS), incorported under French law registered with RCS Montpellier under number 80396522700017
A.3	Registered address	Registered address 8 rue de Dublin 34200 Sète France
A.4	Head office	Same as registered address
A.5	Registration date	03/09/2014
A.6	Legal entity identifier	80395622700017

A.7	Another identifier required pursuant to applicable national law	French tax identification number (SIREN) 803965227
A.8	Contact telephone number	+0033666100010
A.9	E-mail address	affin@bobosohomail.com
A.10	Response time (Days)	24 hours
A.11	Parent company	Not applicable
A.12	Members of the management body	President: Brian Edmond Patrick Fin Nationality: French Functions: – President of SAS Association Familiale Fin (AFFIN) – Administrator of the SPUMP ecosystem – Chief Executive Officer (CEO) of USFRANC LTD Qualifications: MScFSM – University of Salford Diploma in Governance, Risk & Compliance (Dip GRC) – International Compliance Association (ICA) Diploma in Marketing Management (Dip. Mkt. Man. IMM) – Durban University / IMM Graduate School
A.13	Business activity	SAS Association Familiale Fin (AFFIN) is a French holding company engaged in capital investments, equity participation, and digital asset activities, including cryptocurrencies and blockchain-based technologies. The company manages its subsidiaries and investment portfolio, including activities in real estate investment, property development, and commercial operations. AFFIN is actively involved in research and development (R&D) in the fields of cybersecurity, crypto-asset security, and blockchain infrastructure. This includes the design, development, and support of technologies related to secure digital asset management, anti-intrusion systems, and crypto audit frameworks. Through its internal and affiliated structures, AFFIN supports the development of cybersecurity solutions, blockchain ecosystems, and digital financial infrastructure, including the SPUMP ecosystem and related platforms. Including proprietary cybersecurity systems and blockchain security protocols developed internally.

		The company operates both directly and through its controlled entities, overseeing strategic investments, project development, and ecosystem growth within the fields of technology, digital assets, and financial innovation.
A.14	Parent company business activity	Not applicable
A.15	Newly established	The company was incorporated on 03 September 2014
A.16	Financial condition for the past three years	The company has maintained stable financial operations over the past three years, funded through its own capital resources and internal revenues. AFFIN has operated without reliance on external financing or institutional investors, maintaining a conservative financial structure. Further details on the financial condition of the company are provided in section A.17.
A.17	Financial condition since registration	Since its incorporation, SAS Association Familiale Fin (AFFIN) has operated as a privately owned and self-funded holding company. The company has not raised external capital and does not rely on third-party investors or institutional financing. AFFIN is owned through a private family trust structure under the control of Brian Edmond Patrick Fin. AFFIN maintains a conservative financial structure with no outstanding credit facilities, debt obligations, or external financial liabilities. The company’s activities are funded through its own capital resources and revenues generated from its investment activities and subsidiaries. AFFIN holds and manages a diversified portfolio of assets, including real estate investments (property holdings), technology ventures, and digital asset projects. The company is actively involved in research and development (R&D) in cybersecurity, crypto-asset security, blockchain infrastructure, and crypto audit systems. AFFIN operates both directly and through its controlled entities, overseeing strategic investments, project development, and ecosystem growth across its various sectors. The company’s financial strategy is based on long-term capital preservation, controlled growth, and reinvestment into its ecosystem and technological development.

Part B - Information about other persons involved in the crypto-asset project

Part C - The crypto-asset project described in this white paper is developed, managed, and operated within the AFFIN group structure. In accordance to Article 6(1), second subparagraph, of Regulation (EU) 2023/1114.the following entities are involved in the administration, development, and strategic oversight of the project.

Role: Holding Company / Strategic Management / Treasury & Reserve Oversight

Registered Address:
8 Rue de Dublin,
34200 Sète,
France

Registration Number: 803 965 227 RCS Montpellier

Description:
AFFIN acts as the principal holding and management entity of the ecosystem. It oversees capital allocation, reserve management, investment strategy, and long-term development of the crypto-asset infrastructure. The company also manages subsidiaries in property, technology, and digital asset development.

Role: Crypto-asset Development / Blockchain Infrastructure / Network Operations

Registered Address:
4th Floor, Silverstream House,
45 Fitzroy Street, London,
W1T 6EB, United Kingdom

Description:
USFRANC LTD is responsible for the technical development, deployment, and operation of the blockchain infrastructure, including wallet systems, transaction processing, and network coordination.

Role: Research & Development / Cybersecurity / Blockchain Security / Crypto Audit

Description:
The AFFIN group conducts internal research through its own subsidiary and development activities focused on cybersecurity, crypto-asset security, and blockchain infrastructure. This includes the development of proprietary technologies within the Bitss ecosystem, smart contract systems, crypto security, crypto audits transaction validation and audit mechanisms designed to ensure security, integrity, and transparency.

The project does not rely on external third-party entities for its core development, issuance, or operational management. All strategic, technical, and financial functions are conducted internally within the AFFIN group, ensuring full control crypto-assets ecosystem.

Acquisition Rights and Decentralized Market Pricing

The founders of SPUMP, Brian Fin and Association Familiale Fin (AFFIN), have received no SPUMP tokens free of charge and hold no complimentary or undisclosed founder allocation.

Brian Fin and Association Familiale Fin retain the right to acquire SPUMP directly, without any fixed purchase deadline, expiration date, or limitation on the period during which this right may be exercised.

Any SPUMP acquired by the founders constitutes a purchase and not a free allocation, grant, reward, or promotional distribution.

SPUMP is intended to operate as a decentralized token, with its market price determined by the actual supply and demand expressed through the applicable trading mechanisms and order books. Buy and sell orders may cause the market price to fluctuate continuously.

The token price is therefore not a fixed value determined by the founders, and no guaranteed market price or future valuation is implied.

The founders' right to acquire SPUMP does not constitute a commitment to purchase any specific quantity, does not guarantee a particular acquisition price, and does not provide a guaranteed market value or return. All acquisitions remain subject to the applicable SPUMP purchase and network rules.

Part D - Information about the crypto-asset project

D.1	Crypto-asset project name	Scotty Pumpkin ecosystem

D.2	Crypto-assets name	Scotty Pumpkin
D.3	Abbreviation	Spump
D.4	Crypto-asset project description	The Scotty Pumpkin ecosystem is a hybrid Web2 and Web3 marketplace platform designed to enable the buying, selling, and exchange of goods, services, and digital assets across a decentralized environment. The project integrates traditional e-commerce functionality with blockchain-based infrastructure, allowing users to operate online shops, list products, publish content, and transact using digital assets. The platform supports both individual users and businesses, providing scalable tools for digital commerce and marketplace participation. The SPUMP token is a utility token used within the Scotty Pumpkin ecosystem. It facilitates transactions, access to platform features, and participation in ecosystem services. The token may be used for payments, promotional incentives, platform fees, and user engagement mechanisms. The ecosystem is designed to operate across multiple layers, including: - A marketplace environment for goods, services, and digital products - Integration with Web3 wallets for asset ownership and transfers - Optional use of blockchain-based transaction mechanisms, including secure payment flows - Interoperability with external platforms and decentralized applications where applicable The project may incorporate additional features such as: - Creator and merchant tools for digital storefronts - Incentive mechanisms to encourage platform activity and adoption - Integration with decentralized finance (DeFi) services to enhance liquidity and accessibility The Scotty Pumpkin ecosystem does not grant ownership rights, equity participation, or guaranteed financial returns to token holders. The SPUMP token is intended solely for use within the ecosystem as a functional utility asset. All features and integrations will be deployed progressively and remain subject to technical development, market conditions, and regulatory compliance requirements.
D.5	Details of all natural or legal persons involved in the implementation of the crypto-asset project The Scotty Pumpkin project is developed, managed, and operated within the AFFIN group structure. The following entities are involved in the implementation, development, and strategic oversight of the project: AFFIN (SAS Association Familiale Fin) Role: Holding Company / Strategic Management / Treasury & Reserve Oversight Registered Address: 8 Rue de Dublin, 34200	

Sète, France
Registration Number: 803 965 227 RCS Montpellier

Description:
AFFIN acts as the principal holding and management entity of the ecosystem. It oversees capital allocation, reserve management, investment strategy, and longterm development of the crypto-asset infrastructure. The company is fully privately owned through a fiduciary structure and does not rely on external investors or credit financing. AFFIN also manages subsidiaries across property, technology, and digital asset development sectors.

BFIN SASU
Role: Operational Management / Development Coordination / Technical Execution
Registered Address: France (as per registration)
Registration Number: 535 217 731 RCS Montpellier

Description:
BFIN SASU is responsible for operational execution, development coordination, and infrastructure management. This includes platform development, system integration, hosting infrastructure, and ongoing technical support.

USFRANC LTD
Role: Blockchain Development / Wallet Infrastructure / Network Operations
Registered Address: United Kingdom

Description:
USFRANC LTD is responsible for blockchain-related infrastructure, including wallet systems, transaction processing environments, and network coordination across the ecosystem.

AFFIN Group – Internal R&D Division (Bitss / Cybersecurity)
Role: Research & Development / Cybersecurity / Blockchain Security / Crypto Audit

Description:
The AFFIN group conducts internal research and development activities focused on cybersecurity, crypto-asset protection, blockchain infrastructure, and transaction validation systems. This includes proprietary technologies developed within the Bitss ecosystem, covering malware protection, smart contract security, and audit

	mechanisms. The project does not rely on external third-party entities for its core development, issuance, or operational management. All strategic, technical, and financial functions are conducted internally within the AFFIN group.	
D.6	Utility Token Classification The SPUMP token is classified as a utility token within the meaning of Regulation (EU) 2023/1114 (MiCA). The token is designed solely to provide access to, and facilitate the use of, services within the Scotty Pumpkin ecosystem. It enables users to interact with platform features, including payments, marketplace participation, and access to digital services. The SPUMP token does not: - Grant ownership rights in any entity - Provide equity participation or voting rights - Entitle holders to dividends, profits, or financial returns - Represent a claim on assets, reserves, or revenue streams The token is not intended to function as: - A financial instrument - Electronic money (e-money) - A security token Its primary purpose is functional use within the ecosystem, including: - Payment for goods and services - Access to platform features and tools - Participation in promotional and incentive mechanisms - Ecosystem engagement and user interaction All uses of the SPUMP token remain subject to applicable laws, regulatory requirements, and platform terms of use.	
D.7	Key Features of Goods/Services for Utility Token Projects	Key Features of Goods / Services for Utility Token Projects The SPUMP token is designed to operate within the Scotty Pumpkin ecosystem as a functional utility token, enabling access to a range of digital services, marketplace features, and Web2/Web3 integrations. The core components of the Scotty Pumpkin ecosystem include: Scotty Marketplace Infrastructure The Scotty Pumpkin ecosystem provides a digital marketplace environment where users can buy, sell, and promote goods and services. This includes both Web2 and Web3-compatible listings, allowing individuals and businesses to operate online shops and classified advertisements. SPUMP is used within the marketplace as: - A payment method for goods and services - A mechanism to unlock additional listing capacity - A tool to activate premium shop features and seller tools

		Digital Shop Creation & E-Commerce Integration Users can create and manage their own online shops within the ecosystem. SPUMP enables: - Activation of shop functionality - Access to enhanced product visibility - Integration with e-commerce tools powered by the ecosystem The system is designed to support scalable online business activity without reliance on third-party marketplace providers. Advertising & Listing Services SPUMP is used to enhance visibility within the platform: - Promotion of listings - Priority placement within marketplace categories - Access to extended advertising features Basic listings may be free, while advanced visibility and scaling tools require SPUMP usage. Payment & Transaction Layer SPUMP functions as a transactional utility token within the ecosystem, supporting: - Peer-to-peer payments - Merchant transactions - Internal platform exchanges Transactions are executed within the platform environment or compatible wallet infrastructure. Incentive & Engagement Mechanisms The token may be used within the ecosystem to: - Reward user activity - Support promotional campaigns - Encourage participation within the platform All incentive mechanisms remain controlled within the platform logic and are not guaranteed. Web2 / Web3 Integration Layer The Scotty Pumpkin ecosystem is designed to bridge traditional web services and blockchain-enabled environments. SPUMP enables interaction across: - Marketplace platforms - Digital services - Wallet-based transactions All integrations are deployed progressively and remain subject to technical development and regulatory compliance. The SPUMP token is strictly limited to utility functions within the ecosystem and does not grant any ownership rights, financial returns, or governance control over the platform or its entities.

Legal & consulting	Legal & Consulting / Administration The administration and legal

		oversight of the SPUMP crypto-asset project are conducted internally within the AFFIN group structure. Primary Administrator Brian Fin Administrator and Project Lead AFFIN Group Registered Address: 8 Rue de Dublin 34200 Sète France Legal & Regulatory Support The project benefits from legal and regulatory advisory services coordinated through the AFFIN group and its appointed legal consultants. These advisory functions include: - Regulatory compliance (MiCA and applicable frameworks) - Legal structuring of the crypto-asset project - Contract

D.8	Plans for the token	The SPUMP token is designed to support the progressive development and expansion of the Scotty Pumpkin ecosystem. Its primary function is to enable access to platform services, facilitate transactions, and support marketplace growth. Marketplace Expansion The token will be increasingly integrated into the Scotty Pumpkin marketplace, where it will be used for: - Purchasing goods and services - Unlocking advanced listing capabilities - Activating and scaling digital shops As the platform grows, SPUMP usage is expected to expand alongside user adoption and marketplace activity. E-Commerce & Business Integration SPUMP will be integrated into e-commerce tools, enabling businesses and individual sellers to: - Accept SPUMP as a payment method - Access enhanced commercial features - Operate independently within the ecosystem Integration with external platforms may be developed to increase usability and accessibility. Advertising & Visibility Tools Future developments include enhanced advertising systems powered by SPUMP, allowing users to: - Promote listings

- Increase product visibility
- Access premium placement within the marketplace

These features aim to create a self-sustaining digital economy within the platform.

Platform Incentives & User Engagement

SPUMP may be used to support ecosystem engagement through:

- Promotional campaigns
- User activity incentives
- Platform participation rewards

All such mechanisms are discretionary and subject to platform rules and regulatory requirements.

Wallet & Payment Integration

The token will be compatible with supported digital wallets, enabling:

- Secure storage
- Transfers between users
- Integration with platform services

Further wallet and infrastructure enhancements may be introduced as development progresses.

Liquidity & Accessibility

SPUMP may be made available on selected trading platforms or exchange environments to improve accessibility and usability. Any such integrations will be conducted in compliance with applicable regulations and market conditions.

No Guarantee of Financial Return

The SPUMP token is not designed as an investment product. It does not provide rights to profits, revenue, or ownership. All usage remains strictly functional within the ecosystem.

All planned developments remain subject to technical feasibility, market conditions, and regulatory compliance.

D.9	Resource Allocation	Resource Allocation The Scotty Pumpkin ecosystem operates with a structured financial strategy designed to ensure sustainable development, operational stability, and long-term platform growth. 1. Use of Resources Funds generated through the SPUMP token ecosystem will be allocated across the following key categories: • Platform Development (R&D): Continuous development and enhancement of the Scotty Pumpkin platform, including marketplace infrastructure, user interface, security systems, and integration of Web2 and Web3 functionalities. • Operational Expenses: Covering infrastructure hosting, technical maintenance, cybersecurity (including Bitss integration), administrative operations, and personnel required to support daily platform activities.

		• Ecosystem Growth & Expansion: Supporting onboarding of sellers, businesses, and users, as well as partnerships, marketplace expansion, and international growth initiatives. • Marketing & User Acquisition: Promotion of the platform through digital campaigns, strategic partnerships, and visibility tools to drive adoption and marketplace activity. • Platform Incentives: Development of promotional campaigns, user engagement initiatives, and ecosystem participation incentives, subject to internal policies and compliance requirements. • Treasury Management: Maintaining financial reserves in fiat and digital assets to ensure operational continuity, risk management, and long-term sustainability. 2. Budgeting & Financial Planning The Scotty Pumpkin ecosystem follows a structured low cost structure optimizing controlled budgeting approach to ensure efficient allocation of resources. Financial planning is designed to prioritize long-term platform development over short-term expenditure. Resource allocation may evolve based on platform growth, user adoption, and market conditions. 3. Financial Controls & Oversight To ensure transparency and responsible management: • Financial operations are managed under internal governance and administrative oversight. • Major financial decisions are subject to internal review and compliance checks. • The treasury strategy prioritizes sustainability and operational continuity. All resource allocation decisions are made to support the development and expansion of the Scotty Pumpkin ecosystem and its marketplace infrastructure.
D.10	Planned use of Collected funds or crypto-Assets	Funds collected through the SPUMP token ecosystem will be primarily used to support the development, operation, and expansion of the Scotty Pumpkin platform. Primary allocation includes: • Platform Development: Enhancement of marketplace systems for creators, builders, produces, manufactures and resellers to present their products on a low cost market platform , online shop creation tools, payment integration, and user experience improvements. • Infrastructure & Technology: Server infrastructure, hosting services (including Bfinit), security layers, and system scalability. • Marketing & Growth: User acquisition campaigns, brand development, partnerships, and expansion of marketplace visibility. • Operational Costs: Administrative management, legal and compliance support, and operational staffing.

		• Ecosystem Expansion: Development of new features, services, and integrations to increase platform utility and adoption. • Liquidity & Accessibility: Facilitating access to the SPUMP token through selected platforms or exchange environments, where applicable and compliant. Funds may also be used to support ongoing innovation and future platform enhancements. No Guarantee of Returns The allocation of funds does not entitle token holders to profits, revenues, or financial returns. All funds are used exclusively to support the ecosystem's development and operations. All use of funds remains subject to market conditions, technical development, and regulatory compliance.

Part E - Information about the offer to the public of crypto-assets or their admission to trading

E.1	Public offering or admission to trading	Admission to trading
E.2	Reasons for public offer or admission to trading	The SPUMP token may be admitted to trading on decentralized exchanges (DEXs), including Solana-based open order book protocols, and, where applicable, centralized exchanges (CEXs), subject to platform approval, operational readiness, liquidity availability, and applicable regulatory requirements.
E.3	Fundraising target	Not applicable
E.4	Minimum subscription goals	Not applicable
E.5	Maximum subscription goals	Not applicable
E.6	Over subscription acceptance	Not applicable
E.7	Over subscription allocation	Not applicable
E.8	Issue price	The SPUMP token does not have a fixed initial issue price. The value of SPUMP tokens may be determined by market conditions,

		liquidity availability, platform mechanisms, and ecosystem activity at the time of distribution or trading.
E.9	Official currency or any other crypto-assets determining the issue price	The SPUMP token may be traded against fiat currencies, stablecoins, or other digital assets depending on the trading platform and market availability.
E.10	Subscription fee	No separate subscription fee is applied directly to the acquisition of SPUMP tokens by the issuer. Standard network, transaction, exchange, or platform fees may apply depending on the method of acquisition, transfer, or use. Separate service fees may apply for optional ecosystem products or services, including Web2-based online shop creation and e-commerce tools offered within the Scotty Pumpkin ecosystem. Such service fees are independent from the market value or pricing of SPUMP tokens.
E.11	Offer price determination method	The market value of SPUMP tokens may fluctuate based on supply and demand, trading activity, liquidity conditions, ecosystem adoption, and general market factors. Liquidity may be introduced on decentralized trading protocols and, where applicable, centralized exchanges, subject to operational and regulatory considerations. No guaranteed minimum value, fixed return, or price stabilization mechanism is provided
E.12	Total number of offered/traded crypto-assets	10,000,000,000 Spump tokens
E.13	Targeted holders	Retail users, ecosystem participants, creators, merchants, online sellers, and eligible digital asset users, subject to applicable jurisdictional restrictions and compliance requirements.
E.14	Holder restrictions	Participation in the acquisition, holding, transfer, or use of SPUMP tokens may be subject to legal, regulatory, and jurisdictional restrictions. Users and participants must comply with all applicable laws and regulations, including anti-money laundering (AML), counter-terrorist financing (CTF), sanctions screening, and applicable tax obligations. Relevant ecosystem operators, service providers, wallet providers, marketplaces, centralized exchanges (CEXs), decentralized exchanges (DEXs), and third-party platforms may apply compliance controls, including identity verification (KYC), transaction monitoring, wallet screening, geo-restrictions, and risk-based access limitations where required by law or

		internal compliance policies. Access to certain SPUMP ecosystem features, marketplace services, trading functions, or digital products may be restricted or unavailable in specific jurisdictions or for certain categories of users. Politically Exposed Persons (PEPs), sanctioned individuals or entities, and participants identified as presenting elevated AML or compliance risks may be restricted or prohibited from accessing certain services involving SPUMP tokens. SPUMP tokens acquired through trading, liquidity pools, decentralized exchange mechanisms, or third-party distribution channels may also be subject to holding periods, transfer limitations, platform restrictions, or additional verification requirements imposed by external service providers in accordance with applicable regulations. The Scotty Pumpkin ecosystem reserves the right to cooperate with lawful regulatory requests, fraud prevention procedures, cybersecurity investigations, and compliance-related enforcement actions where legally required.
E.15	Reimbursement notice	Not applicable
E.16	Refund mechanism	Not applicable
E.17	Refund timeline	Not applicable
E.18	Offer phases	Not applicable
E.19	Early purchase discount	Not applicable.
E.20	Time-limited offer	Not applicable
E.21	Subscription period beginning	Not applicable
E.22	Subscription period end	Not applicable
E.23	Safeguarding arrangements for offered funds/crypto -Assets	SPUMP tokens may be distributed, transferred, stored, swapped, or traded through third-party platforms, including decentralized exchanges (DEXs), liquidity protocols, wallet applications, and, where applicable, centralized exchanges (CEXs). The Scotty Pumpkin ecosystem and associated Web2 services do not directly operate as regulated custodians of user crypto-assets. Users generally retain control of their digital assets through self-custody wallets or through the custodial arrangements of independent third-party service

		providers. Safeguarding of funds, crypto-assets, private keys, wallet credentials, and transaction security is primarily the responsibility of the respective wallet providers, exchanges, liquidity platforms, or custodial service providers selected by participants. Third-party platforms and wallet providers may implement security and safeguarding measures including cold storage, multi-signature protection, access controls, transaction monitoring, fraud prevention systems, withdrawal verification procedures, cybersecurity protections, reserve management systems, and internal compliance controls in accordance with their own operational policies and applicable regulations. Participants are solely responsible for maintaining the confidentiality and security of their wallets, seed phrases, private keys, passwords, authentication credentials, and connected devices. The Scotty Pumpkin ecosystem does not guarantee the solvency, operational continuity, cybersecurity standards, liquidity availability, or custodial performance of third-party exchanges, decentralized protocols, wallet providers, or external service platforms used in connection with SPUMP tokens.
E.24	Payment methods for crypto-asset purchase	SPUMP tokens may be acquired through third-party decentralized exchanges (DEXs), liquidity pools, wallet applications, token swap interfaces, or, where applicable, centralized exchanges (CEXs), subject to platform availability and applicable regulations. Accepted payment methods are determined by the respective third-party platforms and may include cryptocurrencies such as SOL, USDC, or other supported digital assets. The Scotty Pumpkin ecosystem does not directly process fiat currency payments for SPUMP token acquisitions unless provided independently by authorized third-party service providers.
E.25	Value transfer methods for reimbursement	Not applicable. SPUMP tokens are utility crypto-assets intended for ecosystem participation and marketplace interaction. No guaranteed reimbursement, redemption, or repayment mechanism is attached to the token.
E.26	Right of withdrawal	Not applicable. Blockchain transactions involving SPUMP tokens are generally irreversible once confirmed on the applicable network. Users are responsible for verifying wallet addresses, transaction details, and platform requirements prior to confirming transactions.

E.27	Transfer of purchased crypto-assets	SPUMP tokens may be transferred between compatible wallets supporting Solana-based SPL tokens, subject to blockchain confirmation, wallet compatibility, network availability, and applicable third-party platform rules. Transfers may also be subject to compliance procedures, transaction monitoring, or temporary restrictions imposed by exchanges, wallet providers, or applicable regulations.
E.28	Transfer time schedule	Transfer timing depends on the operational status, congestion level, confirmation speed, and technical performance of the Solana blockchain network and any integrated third-party platforms. The Scotty Pumpkin ecosystem does not guarantee uninterrupted transfer availability or transaction finality times.
E.29	Purchaser's technical requirements	Users must have access to a compatible digital wallet supporting Solana-based tokens (SPL standard), as well as a basic understanding of blockchain transactions and private key management. Access to SPUMP tokens via third-party trading platforms (including decentralized exchanges and, where applicable, centralized exchanges) may require compliance with additional technical, security, and verification requirements imposed by such platforms.
E.30	Crypto-asset service provider (CASP) name	Not applicable The Scotty Pumpkin ecosystem is not currently operating as a regulated Crypto-Asset Service Provider (CASP) under MiCA.
E.31	CASP identifier	Not applicable
E.32	Placement form	Not applicable. SPUMP tokens may become available through decentralized exchange liquidity pools, secondary market trading, ecosystem integrations, or third-party platform listings.
E.33	Trading platforms name	SPUMP tokens may be traded on decentralized exchanges (DEXs), including Solana ecosystem trading protocols and liquidity infrastructures, and, where applicable, may also be listed on centralized exchanges (CEXs), subject to independent platform approval, technical integration, and regulatory compliance requirements. Trading platform availability may change over time and is not guaranteed.
E.34	Trading platforms Market identifier code (MIC)	Not applicable. Decentralized exchanges and blockchain liquidity protocols may not use traditional Market Identifier Codes (MICs).
E.35	Trading platforms access	Not applicable. Decentralized exchanges and blockchain liquidity protocols may not use traditional Market Identifier Codes (MICs).or KYC system's

E.36	Involved costs	Users may incur blockchain network fees, trading fees, liquidity pool fees, wallet provider fees, exchange fees, slippage costs, or other transaction-related charges imposed by independent third-party platforms. Such costs are external to the SPUMP token itself and may vary depending on market conditions, blockchain congestion, liquidity availability, and platform pricing policies.
E.37	Offer expenses	Costs associated with listing, liquidity provision, and platform integration may be incurred and will be managed internally by the project in accordance with its operational strategy.

E.38	Conflicts of interest	To the knowledge of the project operators at the time of publication, no material conflicts of interest have been identified in relation to the preparation of this crypto-asset white paper. Project operators, developers, contributors, ecosystem participants, or affiliated parties may however hold SPUMP tokens or participate in ecosystem-related activities.
E.39	Applicable law	This offering and the related ecosystem activities are governed by applicable laws and regulations within the relevant jurisdictions, including, where applicable, Regulation (EU) 2023/1114 on Markets in Crypto-Assets (MiCA), together with any applicable national laws, consumer protection laws, anti-money laundering regulations, and digital asset compliance requirements.
E.40	Competent court	Any disputes arising in connection with the acquisition, transfer, trading, holding, or use of SPUMP tokens, or in relation to this white paper, shall be subject to the jurisdiction of the competent courts of the applicable jurisdiction, subject to mandatory local consumer or regulatory protections where applicable.

Part F - Information about the crypto-assets

F.1	Crypto-asset type	Utility Token (SPL Token on the Solana blockchain).
F.2	Crypto-asset functionality	SPUMP is a utility crypto-asset designed for use within the Scotty Pumpkin ecosystem. The token is intended to support ecosystem interaction, marketplace activity, online shop integration, digital services, promotional tools, community participation, and Web2/Web3 commerce functionalities. SPUMP may also be used in connection with marketplace features, advertising services, digital content distribution, online

		store creation tools, ecosystem rewards, and future platform integrations. The token does not represent ownership rights, equity participation, profit-sharing rights, debt instruments, or claims against the issuer or ecosystem operators.
F.3	Planned application of functionalities	Planned functionalities include integration with the Scotty Pumpkin marketplace ecosystem, SPUMP Shop Creator, Sosay social commerce infrastructure, online advertising systems, creator tools, digital product sales, and additional Web3 ecosystem services. Additional technical integrations, wallet compatibility, decentralized exchange (DEX) support, and ecosystem utility functions may be introduced progressively depending on operational, technical, legal, and commercial development requirements. Timelines, integrations, functionalities, and ecosystem deployments remain subject to development progress, technical feasibility, market conditions, cybersecurity considerations, and applicable regulatory requirements.
F.4	Type of crypto-asset white paper	Other crypto-assets under Regulation (EU) 2023/1114 (MiCA). Code: OTHR
F.5	The type of submission	New submission. Code: NEWT
F.6	Crypto-asset characteristics	New submission. Code: NEWT F.6 – Crypto-asset characteristics Blockchain: Solana Token Standard: SPL (Solana Program Library) Crypto-asset Name: SPUMP Commercial Name: Scotty Pumpkin Token Total Maximum Supply: 10,000,000,000 SPUMP tokens The token supply is fixed at deployment level unless modified through future governance, migration, technical restructuring, or lawful ecosystem upgrades, where applicable. SPUMP tokens may interact with decentralized exchanges (DEXs), liquidity pools, wallet applications, Web3 integrations, and marketplace infrastructures within the Scotty Pumpkin ecosystem.

F.7	Commercial name or trading name	Scotty Pumpkin (SPUMP)
F.8	Website of the issuer	Scotty Pumpkin Official Website (https://chatgpt.com)
F.9	Starting date of offer to the public or admission to trading	2026-03-17
F.10	Publication date	2026-03-17
F.11	Any other services provided by the issuer	The Scotty Pumpkin ecosystem may additionally provide online marketplace services, Web2 e-commerce creation tools, advertising services, creator tools, social commerce integrations, online shop infrastructure, digital ecosystem services, and associated Web3 interoperability solutions. These services are independent operational services and do not constitute regulated financial services unless otherwise stated by applicable law.
F.12	Language or languages of the crypto-asset white paper	English Additional translated versions may be published for informational purposes. In the event of inconsistencies, the English version shall prevail unless otherwise required by applicable law.
F.13	Digital token identifier code used to uniquely identify the crypto-asset or each of the several crypto assets to which the white paper relates, where available	SPUMP Blockchain Network: Solana Token Standard: SPL
F.14	Functionally fungible group digital token identifier, where available	Not applicable
F.15	Voluntary data flag	false
F.16	Personal data flag	false

F.17	LEI eligibility	true Where applicable, the issuer or affiliated operational entities may obtain or maintain Legal Entity Identifier (LEI) registration for regulatory, operational, or compliance purposes.

F.18	Home Member State	France

		Note [The project may also maintain operational, hosting, development, or commercial activities in the United Kingdom outside the scope of EU Member State classification under Regulation (EU) 2023/1114.]
F.19	Host Member State	The crypto-asset white paper may be made available within member states of the European Economic Area (EEA), subject to applicable laws, regulatory requirements, restrictions, notifications, and compliance obligations. This may include: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, and Sweden.

Part G - Information on the rights and obligations attached to the crypto-assets

G.1	Purchaser rights and obligations	SPUMP token holders do not acquire shareholder rights, equity ownership rights, profit participation rights, dividend rights, repayment rights, or enforceable governance rights within the Scotty Pumpkin ecosystem or affiliated operational entities. SPUMP functions as a utility crypto-asset intended for use within the Scotty Pumpkin ecosystem, including marketplace participation, digital commerce integrations, online shop creation services, advertising systems, ecosystem access features, and compatible Web3 services.
G.2	Exercise of rights and obligations	Utility functionalities associated with SPUMP may be accessed through compatible blockchain wallets, ecosystem platforms, decentralized applications, marketplace services, and approved integrations, subject to operational availability and compliance requirements. Users remain responsible for wallet security, private keys, account credentials, cybersecurity protections, and compliance with applicable laws.
G.3	Conditions for modifications of rights and obligations	The issuer or affiliated ecosystem operators may modify, expand, suspend, replace, or discontinue certain SPUMP-related functionalities, technical integrations, operational systems, marketplace services, or utility mechanisms where necessary for operational, security, technical, legal, or commercial reasons. Changes may be communicated through official ecosystem channels where appropriate.
G.4	Future public offers	“The total minted supply is 10,000,000,000 SPUMP tokens. No further minting is authorised. Within the existing minted supply, future ecosystem distributions, releases, liquidity allocations, marketplace integrations, or public availability mechanisms may occur subject to applicable laws, operational requirements, and market conditions.” No guarantee is provided regarding future offerings or market availability.

G.5	Issuer retained crypto-assets	Portions of the SPUMP token supply may be retained by affiliated operational entities for ecosystem development, liquidity management, marketing, infrastructure, security, operational growth, marketplace expansion, strategic partnerships, reserves, or future ecosystem deployment. Token allocations may evolve over time according to ecosystem requirements.
G.6	Utility token classification	true SPUMP is classified as a utility crypto-asset intended for access, participation, integration, settlement, ecosystem interaction, digital commerce functionality, advertising systems, and marketplace-related utility services within the Scotty Pumpkin ecosystem.
G.7	Key features of goods/services of utility tokens	**1. Smart Contract Infrastructure** SPUMP operates through blockchain-based smart contract infrastructure supporting token transfers, ecosystem interactions, marketplace integrations, liquidity functions, and compatible Web3 services. Smart contracts may support: • Marketplace payment processing • Escrow-related transaction logic • Liquidity integrations • Token distribution mechanisms • Ecosystem reward and promotional functions --- **2. Scotty Pumpkin Ecosystem Utility** SPUMP functions as a utility token within the Scotty Pumpkin ecosystem, which may include: • Online marketplace services • Shop creation tools • Social commerce integrations • Advertising and promotional services • Creator and seller ecosystem participation • Digital goods and service interactions --- **3. Marketplace & Payment Utility** SPUMP may be used within supported ecosystem environments for: • Marketplace purchases • Service payments • Promotional campaigns • Advertising credits • Seller tools and ecosystem participation Availability of functionalities may vary depending on technical deployment, jurisdiction, compliance requirements, and operational development stages.

G.8	Utility tokens redemption	No redemption rights are attached to SPUMP tokens. SPUMP tokens are utility tokens and do not give holders any right to redeem them against the issuer, the ecosystem operator, or any affiliated entity.
G.9	Non-trading request	false
G.10	Crypto-assets purchase or sale modalities	Not applicable. SPUMP tokens may be acquired or traded through third-party platforms, including decentralized exchanges and, where applicable, centralized exchanges, subject to platform availability, user eligibility, liquidity, and applicable laws.
G.11	Crypto-assets transfer restrictions	SPUMP token transfers may be subject to restrictions required by law, regulation, third-party platform rules, wallet requirements, sanctions rules, AML/CTF controls, or risk assessment procedures. Transfers may be restricted, delayed, blocked, or refused where required to comply with applicable laws, platform policies, or security requirements.
		the broader ecosystem, ensuring that the OBOL token remains compliant with legal obligations and functions securely within its intended use.

G.12	Supply adjustment protocols	false
G.13	Supply adjustment mechanisms	Not applicable. The total supply of SPUMP is fixed at 10,000,000,000 tokens. No additional minting is authorised.
G.14	Token value protection schemes	false
G.15	Token value protection schemes description	Not applicable. No price protection, redemption guarantee, buyback guarantee, minimum price, or value stabilisation mechanism is provided.
G.16	Compensation schemes	false
G.17	Compensation schemes description	Not applicable. SPUMP holders are not entitled to compensation, reimbursement, dividends, profit-sharing, or financial returns from the issuer, platform, ecosystem, or affiliated entities.

G.18	Applicable law	French law and applicable European Union regulations, including Regulation (EU) 2023/1114 where applicable.
G.19	Competent court	Competent courts of France, unless otherwise required by applicable law.

Part H – Information on the underlying technology

H.1	Distributed ledger technology (DTL)	Distributed Ledger Technology (“DLT”) refers to a digital system for recording transactions in which the transactions and their details are recorded in multiple places at the same time. Unlike traditional databases, distributed ledgers have no central data store or administration functionality. Instead, the ledger is decentralized, and consensus on transactions is achieved through a process involving multiple validator nodes, each maintaining a synchronized copy of the ledger. The benefits of DLT include increased transparency, enhanced security, improved traceability, interoperability, and greater efficiency of transactions. One of the most well-known forms of DLT is blockchain technology, which uses a chain of cryptographically linked blocks to record and validate transactions. Once recorded, data cannot generally be altered retroactively without affecting subsequent blocks. Blockchain systems may also support smart contracts, allowing predefined transactions and logic to execute automatically through code, thereby reducing reliance on intermediaries and improving operational efficiency. SPUMP operates on the Solana blockchain and uses distributed ledger technology to support ecosystem transactions, marketplace interactions, digital asset transfers, interoperability functions, and smart contract-based utility features within the SPUMP ecosystem.”
H.2	Protocols and technical standards	SPUMP is issued on the Solana blockchain using the SPL token standard. The ecosystem may integrate additional supported blockchains, bridges, or interoperability layers in the future subject to technical, operational, and regulatory considerations.
H.3	Technology used	SPUMP uses the SPL fungible token standard on the Solana blockchain
H.4	Consensus mechanism	SPUMP uses the SPL fungible token standard on the Solana blockchain
H.5	Incentive mechanisms	The Solana network applies validator and transaction fee mechanisms required for blockchain operations. Network fees may vary depending on blockchain activity and congestion. The SPUMP issuer may apply separate ecosystem or marketplace service fees where applicable

H.6	Use of distributed	false

	ledger technology	
H.7	DLT functionality description	The distributed ledger technology used by SPUMP enables decentralized transaction recording, smart contract execution, wallet interoperability, digital asset transfers, marketplace interactions, and ecosystem-based payment functionalities.”
H.8	Audit	true
H.9	Audit outcome	Please see https://github.com/SPUMP-COIN/audit/blob/main/audit-report_v1.pdf

Part I – Information on risks

I.1	Offer-related risks	The public offering and potential future availability of SPUMP tokens involve risks related to market conditions, regulatory developments, liquidity availability, operational execution, and ecosystem adoption. The crypto-asset market is highly volatile, and the value of SPUMP tokens may fluctuate significantly due to market sentiment, speculative trading activity, macroeconomic conditions, technological developments, or changes in the digital asset industry. There is no guarantee that an active secondary market or sufficient liquidity will develop or be maintained for SPUMP tokens. Listing on centralized exchanges (“CEX”) or decentralized exchanges (“DEX”) is not guaranteed and may depend on third-party platform requirements, trading activity, legal restrictions, technical integrations, or commercial considerations. Regulatory changes in certain jurisdictions may restrict the sale, transfer, holding, promotion, or use of SPUMP tokens. Compliance obligations relating to anti-money laundering (“AML”), know-your-customer (“KYC”), sanctions screening, consumer protection, taxation, or digital asset regulations may impact user participation or platform availability. Operational issues involving third-party infrastructure providers, blockchain networks, liquidity providers, wallet integrations, or marketplace systems may delay or affect token distribution, transfers, trading functionality, or ecosystem services.

I.2	Issuer-related risks	The SPUMP ecosystem and related infrastructure operations may face risks associated with legal compliance, operational execution, cybersecurity, financial sustainability, staffing, ecosystem development, and strategic growth. Future operational success depends on the continued ability to maintain infrastructure, develop integrations, manage ecosystem growth, and adapt to evolving market and regulatory environments. The ecosystem operators may rely on third-party service providers, hosting infrastructure, blockchain networks, wallet providers, payment systems, development teams, and external integrations. Any interruption, dispute, technical failure, or commercial disagreement involving these providers may impact ecosystem functionality or user experience. Changes in applicable laws, compliance obligations, taxation frameworks, licensing interpretations, or enforcement practices may require operational changes, geographic restrictions, additional compliance measures, or modifications to ecosystem services. Future development plans, integrations, partnerships, marketplace functions, advertising systems, escrow services, or token utility expansions may not be completed according to projected timelines or may require modifications due to technical, commercial, security, or regulatory considerations.
I.3	Crypto-assets -related risks	SPUMP tokens do not provide ownership rights, equity participation, voting rights, guaranteed returns, repayment obligations, profit-sharing rights, or financial claims against the ecosystem operators or related entities. The utility and perceived value of SPUMP tokens depend on ecosystem adoption, marketplace activity, platform integrations, and community participation. The SPUMP ecosystem relies in part on blockchain infrastructure, including Solana and other supported technologies. Blockchain networks may experience congestion, downtime, transaction delays, increased transaction fees, forks, validator failures, smart contract vulnerabilities, or interoperability issues that could impact token transfers, settlement processes, escrow functionality, marketplace operations, or user access. SPUMP token utility depends on continued ecosystem participation, including adoption of the Scotty Pumpkin Marketplace, Sosay integrations, online shop builder services, advertising systems, escrow functionality, and future Web2/Web3 integrations. If ecosystem growth is slower than anticipated, token utility and market activity may be negatively affected. Crypto-assets are inherently volatile and speculative. Users may lose part or all of the value associated with SPUMP tokens due to market movements, liquidity limitations, trading volatility, reduced demand, technological failures, security incidents, or regulatory developments.
I.4	Project implementation-related risks	The successful implementation and expansion of the SPUMP ecosystem depends on continued technical development, operational scaling, user adoption, marketplace participation, merchant integrations, and ecosystem partnerships. There is a risk that adoption by users, merchants, advertisers, online stores, creators, marketplace participants, or external platforms may occur more slowly than anticipated. Competition from existing marketplaces, social commerce platforms, digital advertising providers, payment systems, or crypto ecosystems may reduce ecosystem growth or user acquisition. Future integrations involving escrow systems, wallet infrastructure, multi-chain support, payment services, advertising systems, social commerce functions, smart contracts, or

		interoperability features may involve technical complexity, development delays, increased operational costs, security reviews, or regulatory considerations. Operational scaling challenges, including server infrastructure expansion, cybersecurity protection, moderation systems, transaction processing, marketplace dispute management, and compliance monitoring, may require additional resources and ongoing technical improvements.
I.5	Technology-related risks	The SPUMP ecosystem and associated infrastructure rely on blockchain technologies, smart contracts, wallet systems, APIs, marketplace platforms, hosting infrastructure, cybersecurity systems, and third-party integrations. Technical vulnerabilities, software defects, coding errors, malicious attacks, or infrastructure failures could negatively impact ecosystem functionality, token transfers, escrow operations, or marketplace services. Smart contract systems may contain vulnerabilities, undiscovered defects, security weaknesses, logic errors, or interoperability issues that could result in unauthorized transactions, locked assets, operational disruptions, or financial losses. Blockchain transactions are generally irreversible once confirmed. The ecosystem may depend on Solana infrastructure and other supported blockchain technologies. Risks associated with blockchain networks include validator failures, forks, denial-of-service attacks, congestion events, network outages, chain reorganizations, bridge vulnerabilities, synchronization failures, and changes to consensus mechanisms. Cybersecurity risks include phishing attacks, credential theft, malware infections, denial-of-service attacks, infrastructure intrusions, social engineering, wallet compromise, unauthorized access, and smart contract exploitation. Any successful attack against ecosystem infrastructure or connected third-party services could affect users, transactions, liquidity systems, or marketplace operations.
I.6	Mitigation measures	The SPUMP ecosystem implements various operational, technical, and cybersecurity measures intended to reduce risks associated with blockchain infrastructure, marketplace systems, smart contracts, hosting environments, and ecosystem integrations. Security measures may include infrastructure monitoring, access controls, firewall protection, wallet security procedures, staged deployment practices, smart contract testing, backup systems, cybersecurity reviews, and operational monitoring. Certain infrastructure components may integrate security technologies developed within the Bitss cybersecurity ecosystem. The ecosystem operators may implement compliance controls, operational restrictions, transaction monitoring procedures, AML/KYC measures where required, and regional limitations to maintain compliance with applicable laws and operational standards. The ecosystem may use staged expansion strategies, controlled infrastructure deployment, reserve management approaches, and gradual integration roll outs to reduce operational and technical risks during ecosystem growth. Despite mitigation efforts, no technology platform, blockchain system, smart contract environment, online marketplace, or digital infrastructure can guarantee complete protection against all operational, legal, financial, or cybersecurity risks. Users should independently evaluate the risks associated with crypto-assets and digital ecosystems before participating.

Part J –

Information on the sustainability indicators in relation to adverse impacts on the climate and other environment-related adverse impacts

J.1	Adverse impacts on climate and other environment-related adverse impacts	**J.1 Adverse impacts on climate and other environment-related adverse impacts** Where possible, the SPUMP ecosystem seeks to operate using energy-efficient blockchain infrastructure and scalable digital systems designed to reduce unnecessary environmental impact. The SPUMP token is currently issued on the Solana blockchain, which utilizes a Proof-of-Stake (“PoS”) based consensus architecture intended to provide lower energy consumption compared to traditional Proof-of-Work (“PoW”) blockchain systems. Proof-of-Stake (“PoS”) is a consensus mechanism used in blockchain networks as an alternative to Proof-of-Work (“PoW”). Unlike PoW systems, which rely on computationally intensive mining operations, PoS networks validate transactions through validator participation and staking mechanisms, significantly reducing electricity consumption and hardware intensity. Compared to many traditional PoW blockchain systems, PoS-based infrastructures generally require substantially lower energy usage for transaction validation and network security. This may reduce the environmental impact associated with blockchain transaction processing, including electricity consumption and certain greenhouse gas emissions linked to large-scale mining operations. The Solana blockchain infrastructure used for SPUMP is designed to support high transaction throughput while maintaining relatively low per-transaction energy consumption compared to many earlier blockchain architectures. However, blockchain systems still require servers, validators, networking equipment, cloud infrastructure, storage systems, and supporting hardware that consume electricity and resources. Environmental impacts may also arise from hardware manufacturing, electronic equipment disposal, cooling systems, data center operations, infrastructure scaling, internet traffic, and ongoing technological expansion associated with blockchain ecosystems and digital marketplace operations. As ecosystem adoption, marketplace activity, transaction volume, smart contract usage, escrow operations, and infrastructure requirements increase, the overall energy consumption associated with the SPUMP ecosystem and connected blockchain infrastructure may also increase. The ecosystem operators may seek to optimize operational efficiency through scalable infrastructure management, efficient hosting environments, optimized transaction systems, and security-focused operational architecture. However, no assurance can be provided that all environmental impacts associated with blockchain technologies, digital commerce systems, or supporting infrastructure can be eliminated entirely. Overall, the ecosystem operators consider modern PoS-based blockchain infrastructure to represent a more energy-efficient alternative to traditional large-scale PoW mining systems currently used within parts of the crypto-asset industry.
